An introduction to Capgemini AI coach solution

Capgemini

AI-POWERED TRAINING FOR MR
- VIRTUAL F2F HCP ENGAGEMENT & DEPARTMENT CONFERENCE PRESENTATION

Our AI-powered Digital HCPs simulate real-world interactions with:

- **Human-like emotional depth** for objection handling drills & Virtual department conference presentation
- **Personalized training paths** based on MR's role/BU
- **Data-driven insights** to turn practice into measurable growth
- **Dynamic course optimization** leveraging AI capability

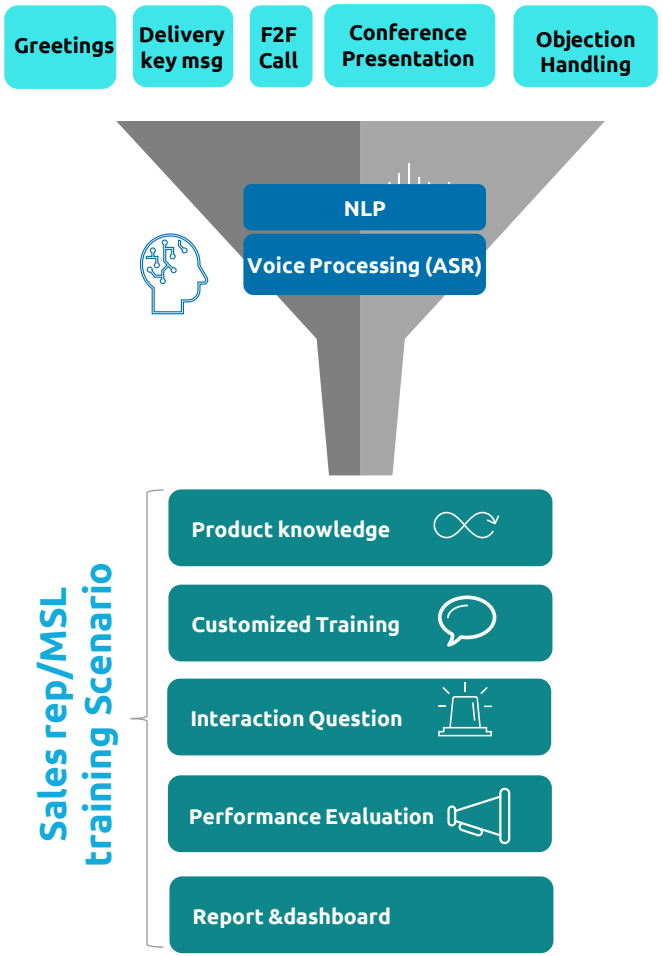
Elevates MR's core competencies in:

✓ Communication and situational response

✓ Medical presentation skills

One-on-one communication with Digital HCP

One-to-many Virtual Department Conference Presentation with Digital HCP



Business Value

Accelerate Training Efficiency (Cut time-to-competency)

Significant Cost Optimization (Reduce L&D OPEX)

Fully Traceable Training Paths (Audit-ready competency tracking)

CORE BUSINESS SCENARIOS

Digitalization empowers efficient training

Training Material Management

- Centralized document management for Word/Excel/PDF/content uploads
- Version control and archiving of training materials
- Automatic deletion of voice records per retention policies
- Historical data archiving for departed employees

F2F HCP Engagement

- Handle F2F calls with objection handling.
- Provide scenario and digital HCP background visibility for MR.
- •Accept audio and text inputs with corresponding outputs from Digital HCP.
- Allow history conversation review.
- •Provide scores and feedback based on score criteria
- Offer a customizable rating criteria and feedback system

Virtual Department Conference Presentation

- Support content presentations with product/disease knowledge and audience question answering
- Provide presentation multi-scenario visibility for MR.
- Accept audio input with live translated text on screen.
- Generate typical objections based on historical data and provide verbal suggestions.
- Offer a customizable rating criteria and feedback.

Report and Dashboard

- Generates standard reports with sorting/filtering by BU, role and time period
- Provides personal and group-level analysis of training results
- Enables export of results in PDF/Excel formats
- Tracks training progress/completion status across organization

User Demo Design – HCP Coach

Display scenarios with digital HCP background visibility, master objection handling during interactions, seamlessly switch between audio/text inputs for responsive outputs, and review past conversations to drive continuous improvement.

Scenario and Digital HCP Background Visibility: Experience realistic medical scenarios and benefit from the visibility of digital HCP backgrounds, enhancing your understanding and preparation for various medical situations.

Objection Handling with Digital HCP: Engage intelligently with digital HCPs by handling objections during interactions, ensuring clear and efficient communication.

Audio and Text Inputs with Corresponding Outputs: Interact with the system using both audio and text inputs, receiving accurate and timely responses from the digital HCP in either format.

History Conversation Review: Enhance your performance by reviewing and analyzing historical conversations, facilitating continuous learning and quality assurance.

REFERENCE CASE:

Virtual Doctor and Virtual Coach

Project Overview

The Virtual HCP solution was developed for a top MNC company to help MRs to role play in complex scenarios. Leveraging AI-powered digital human technology, the platform simulates realistic interactions between MRs and virtual HCPs, offering multi-product training, diverse personality settings, and voice-based Q&A capabilities to improve communication skills and product knowledge.

Solution Highlights

Digital Human is an innovative solution for human-like interactions between users and machines. With the human-level understanding and the power of AI, brings the sales team training to the next level via:

- Heartfelt and appropriate human-like conversation powered by text analytics to help improving recognizing the needs ,delivery key message and change the HCP's perspectives.
- Constantly maintained and updated NPL ability to judge and analyze complex expressions such as Emotion, context, and intention with different HCP profile and journey;
- Generate informative insights to evaluate training efficiency and guide DM coaching's suggestions

Business Value

Enhance Professional Capability: lead to better objection handling skills or communication skills.

Optimize Training Effectiveness & Learning Efficiency: Accelerate skill development with personalized, tech-enabled training to reduce time-to-competency and adapt faster.

Cost Reduction: Lower operational costs by streamlining training and improving HCP interaction efficiency to maximize ROI.

REFERENCE CASE:

Virtual HCP

Project Overview

A role-play platform enabling MR to practice objection handling in diverse doctor-rep scenarios, with AI-driven feedback to refine communication skills and shift HCP perspectives.

Solution Highlights

Scenario-Based Simulations

Realistic role-play environments with customizable variables (e.g., patient profiles, doctor attitudes) to replicate on-the-ground challenges.

AI-Powered Feedback Engine

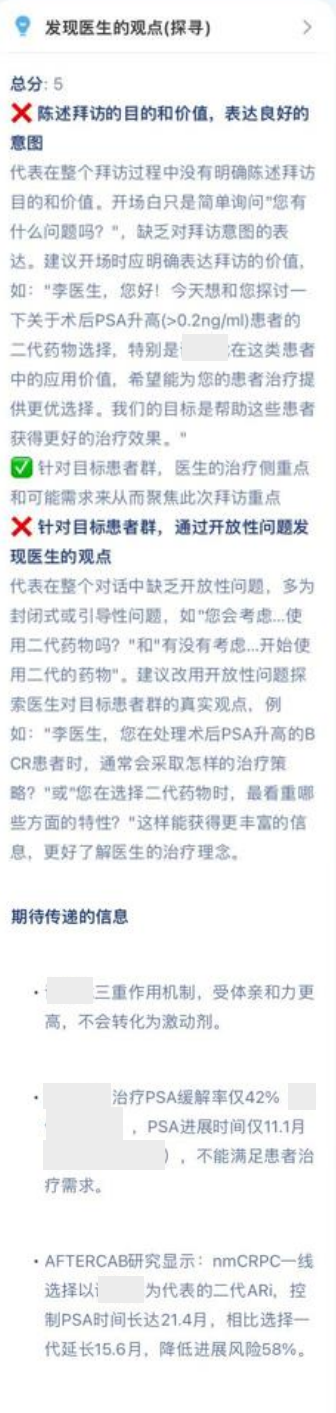
Multidimensional scoring system evaluating key competencies and real-time suggestions and post-session reports highlighting strengths, weaknesses, and targeted improvement areas.

Scalable & Customizable

Configurable scenarios to align with specific therapeutic areas, product launches, or regional communication norms.

Business Value

Enhanced Sales Effectiveness: Equips MR with proven techniques to navigate and boosting call success rates and product uptake.

Data-Driven Performance Optimization: Identifies skill gaps and training priorities through aggregated analytics, enabling targeted coaching and resource allocation.


Competitive Differentiation: Adaptable to emerging market trends or regulatory changes, ensuring long-term relevance.
